BENIGN PIGMENTED LESIONS

NOTE: There will be some down time with this treatment. Treated area may appear brown and crusty/red for several days to one week following treatment.

Pre-treatment

- ✓ The skin must be "squeaky clean" and dry. No make-up, lotions, moisturizers.
- ✓ **Do not tan** 2-4 weeks prior to treatment.
- ✓ Topical anesthetic may be used prior to treatment.

Post-treatment

- ✓ Use a cool compress can be applied immediately post treatment for comfort.
- ✓ Patient use and antibiotic or Aquaphor (as some people may experience an allergic reaction to antibiotic ointment) to keep the treated area moist until the scab/crust falls off.
- ✓ Skin underneath where the scab/crust fell off will be pink. The normal skin color will return with time.
- ✓ The Patient must wear sunblock with at least SPF 30 or more daily to protect the treated area for at least two weeks following treatment. The patient should reapply the sunblock several times during the day.
